The person who influences me most is my father. He is a lead engineer working on high-speed railway projects.

He takes his work very seriously and pays attention to every detail. He always says a miss is as good as a mile, so he works to high standards all the time. However, he is modest and easy to work with his workmates.

His good qualities influence me positively. In the past, I was careless and often made small mistakes in my study. Inspired by him, I now treat my schoolwork carefully and value every small task. I have formed a habit of checking my homework over and over again and taking every study task seriously. Meanwhile, I keep modest and try to build good relationships with my classmates. Whenever my classmates need help, I'm always ready to lend a hand.

My father is exactly the person who has influenced me most, and I will keep learning from him all the time.

I think "Where there is a will, there is a way" tells us that we can achieve anything if we keep trying and never give up. I think the sentence shows the truth of success.

Ma Long has set a good example. He dreamed of being an excellent ping-pong player from childhood. In his early years as an athlete, he failed many times when he competed against top players. However, he held a strong will and kept practising every day. Now his wonderful performances show the whole world what a great player he is.

We will surely meet difficulties during our life. What really matters is that we don't give up. Just keep working till we make it.

Of all the things in nature, peanuts teach me a lot. They look common, but they are very helpful. Peanuts are useful in many ways and bring good things to people quietly without showing off.

Being on daily duty as a class cleaner may seem ordinary, and few classmates pay much attention to this work. I used to get bored with it and never take it seriously. Now I have changed a lot. I have realized that being useful is more important than being attractive. Some work appears unimportant, yet it plays an important role. I take my duty seriously every day and keep our classroom clean and tidy. It provides all of us with a pleasant environment for study.

I have learnt a lot from peanuts: being useful matters most. True value lies in quiet devotion, not in appearance. I will try to be a person like peanuts.

Role Model's Power

My role model is Stephen Hawking. He is recognized as one of the greatest scientists in history. He is famous for his pioneering work in science and his great courage to fight against serious illness.

Hawking was born in the UK in 1942. He studied Physics at Oxford University after middle school. He became very ill shortly after his 21st birthday. Doctors said that he had only a few years to live. As his illness got worse, he could only move a few fingers. Yet he stayed positive and never gave up his research.

His strong will has inspired millions of people across the world. However difficult life is, we can find ways to succeed and we should never give up.
